Profile

Dedicated AI & Machine Learning student with expertise in designing, developing, and deploying intelligent systems to solve real-world challenges. Skilled in leveraging advanced algorithms, machine learning models, deep learning frameworks, and programming languages like Python. Proficient in areas such as natural language processing (NLP), computer vision, and predictive analytics. Passionate about exploring innovative AI-driven solutions and transforming data into actionable insights. I aspire to work with cutting-edge technologies in a dynamic environment where I can enhance my technical expertise, gain hands-on experience, and contribute to impactful projects. Eager to collaborate with interdisciplinary teams, drive innovation, and address complex business problems using AI and ML techniques to foster both organizational growth and personal development.

Education

INSTITUTION	DEGREE/GRADE	SCORE
Master of AIML	Present	Present
Bachelor of AIML	Gujarat University (Ahmedabad)	6.3/10 CGPA [2024]
(S.S.C.), G.S.E.B.	Divine Child Public School (Ahmedabad)	74.72 [2019]
(H.S.C), G.H.S.E.B.	Navsarjan High Secondary School (Ahmedabad)	86.34 [2021]

Experience

Freshers

CERTIFICATION:-

National Conference on Applied Mathematical Sciences poster presentation
Topic name :- Exploring AI; Generative , predictive , Interactive

hackathon carnival
(26-27 September 2023)
Topic name:- Student Dropout Analysis for School Education

Skills

Python

NumPy, Pandas, Scikit-learn , TensorFlow, PyTorch.

R

For statistical analysis and visualization.

Machine Learnig

Supervised Learning, Unsupervised Learning, Esemble Methods..

Deep learning

Neural Networks, Convolutional and Recurrent Neural Networks, LSTM.

Data Vizualization

Matplotlib, Seaborn, Plotly, ggplot2, tableau , Power BI.

Data Analysis & Database Management

SQL (for querying databases).

Projects

- A study about people's perception on choosing edible oil(research)

Conducted a study analyzing people's perceptions and preferences in selecting edible oils, considering factors such as health benefits, taste, cost, and environmental impact.
- The use of machine learning in customer churn prediction

Developed a customer churn prediction system using machine learning to identify at-risk customers and enhance retention strategies by analyzing behavioral, demographic, and transactional data
- Heart Disease prediction using machine learning

Developed a heart disease prediction system using machine learning to analyze medical data and predict the likelihood of heart disease based on various health parameters and risk factors.
- CNN & ResNet50 Unleashed: Mastering CIFAR-10 Image Recognition

Developed a robust image recognition system leveraging CNN and ResNet50 architectures, achieving high accuracy in classifying CIFAR-10 dataset images.
